

- **What is the updated MVP of your product?**

M (Minimum): The calendar reading is automatically triggered in conjunction with the 5-minute micro-training.

V (Viable): AI motion feedback (for 1-2 key actions) and 3 targeted courses.

P (Product): A physical prototype device integrating a camera, UI interaction, and mirror reflection effects.

- **How did you incorporate the findings from your Concept Test into your prototype?**

Incorporating the findings by adding calendar-synced scheduling to fit busy routines, micro-workouts to lower the entry barrier, and AI visual feedback to provide the real-time expert correction needed for safety and motivation.

- **What are 2 -3 tasks or flows that you want to test with users? For example, with "Moovya" the three tasks could be creating an account, booking storage space, and rescheduling the booking.**

- Review the weekly AI-generated format correction report and identify areas for improvement.
- Update your "Focus Areas" (e.g., neck pain) to get tailored stretching recommendations.
- Synchronize your calendar and set trigger rules for "mini workouts".

- **How many people have filled out your screener so far?**

22 people.

- **Who have you scheduled 30 - 60 mins usability test sessions with? Where were they sourced from (e.g. LinkedIn, Reddit, etc)? What date / time are they scheduled for?**

N/A

- **For the participants that have been scheduled, did you send them a calendar invite with a Zoom link if it will be remote or a location to meet you at in CCA?**

N/A

- **Who will be the moderator for the different sessions?**

Jason S/W, Annalise

- **Any difficulties with recruiting study participants? If so, how are you planning to adjust your approach?**

Hard to find people that are willing to join our usability testing sessions. We're still working on it.
