

## Text and Visual Readability Issues

- *tried resizing the floating nav menu and made it too tiny to use. "whoops, i shrunk it way too much." definitely needs a shrink limit so the UI doesn't disappear.*
- *hates the hint boxes. says the text in the title and header is super unhelpful, repetitive, and just full of text. "this is just a wall of text, i'm not reading all that".*
- *wants the calendar plan options to be persistent. "i want to see my calendar plan right here all the time." says they should always be on the screen for quick access.* - Tamiko

- *user immediately noted video needs to be bigger and brighter to see what's happening.* - Anny

*could be more clear. Maybe it needs a more obvious camera or button. If not, maybe organize the content better so people can catch it faster. I feel like the screen is kind of crowded, and at first I couldn't see where to start.* - Nyu

- *"make it simpler and more to the point. make the words bigger".*
- *wants recommended workouts right off the bat when she opens the app.*
- *says the most important thing is just getting a curated workout fast, and all the intense customization stuff should just be hidden in the profile section for later.* - Anny

- *text needs to be way bigger, says "everything's so small" and she can't really read the type unless she gets close.*
- *top bar is totally obstructing the rep bar and the text that says "rest".* - Anny

- *couldn't easily spot what exercise she was supposed to be doing. "where does it actually say what i'm doing?" needs the move name placed in a much more noticeable manner.* - Tamiko

*A: I would definitely try to have a bigger screen, or maybe use a projector instead of a computer screen.* - Nyu

- *didn't realize she was doing jumping jacks at first. suggested keeping the word for the exercise displayed prominently on top or side.*
- *got stuck on "standing march" because she didn't know what it was. said "it'd be nice if there was like an animation telling you like how to do it".*
- *suggested having a guide or a video playing during the 30-second rest break to show what the next workout is gonna be.*
- *wasn't sure if the camera was supposed to see her from the front or the side, needs a guide so people know it needs full body in view to count.* - Anny

*[Speaker 1] "It is located on top of the rep bar, but that rep bar is..." [Speaker 1] "Pretty high up and it's covered by the top bar. So you see it's right up there. You can see it. Also, if you move back a bit, you can see that bottom text. That says rest as well. But that's covered, right?" [Speaker 2] "It's just two. Yeah, it's covered."* - Anny

## Onboarding and User Guidance Gaps

● she HATES having to switch between pointing and pinching. "I just want one. I don't want to switch back... I just want one thing". ● prefers the pinch gesture overall. says it feels faster and more responsive. ● the gesture to start/exit (thumbs and index fill bar) takes way too long and is too text-heavy to learn. just wants a simple icon or image to show what to do. - Anny

● annoyed she can't skip typing her name in the onboarding flow. ● wants a back button in onboarding, expected to just go back instead of forward to confirm. - Anny

*But the process of opening this app is kind of suffering, I think. Just a lot of the time I can't figure out how, like, I want to go to the next step or I want to take this option. Sometimes the feedback of the app is too sensitive, and sometimes it goes the other way.* - Peter

[Speaker 2] "Well, when like it told me one to three to four to six, like if I choose one, does it really need like another confirmation? I would expect to just go forward." - Anny

● went through the onboarding flow, seemed a bit tedious. ● suggested adding a drop down plan filter to make searching for routines easier. "would be way faster if this was just a dropdown". ● wants to see all the available workout plans directly from the workout mode screen, rather than having to navigate all the way back out. - Tamiko

● using the pinching gesture fine, but she accidentally triggered the end of the workout. "oh no, did i just cancel the whole thing?". ● strongly recommends adding a cooldown to the exit gesture so users don't accidentally end the workout if they move their hands wrong. ● said there needs to be an "are you sure?" confirmation screen before the workout actually closes out. - Tamiko

● didn't realize she was doing jumping jacks at first. suggested keeping the word for the exercise displayed prominently on top or side. ● got stuck on "standing march" because she didn't know what it was. said "it'd be nice if there was like a animation telling you like how to do it". ● suggested having a guide or a video playing during the 30-second rest break to show what the next workout is gonna be. ● wasn't sure if the camera was supposed to see her from the front or the side, needs a guide so people know it needs full body in view to count. - Anny

A: I have no clue about that the first time. I don't know where to find it or how to start. - Nyu

[Speaker 1] "Hi, welcome to Pulse, your smart mirror workout buddy. To get started, please tell me how you're feeling today. Make a pointing gesture and touch a circle and hold to select." [Speaker 2] "I think your fingers should be down a little bit. Okay. The two fingers should be down a little bit." [Speaker 2] "Yeah, got it." [Speaker 2] "Pinch to select. Pinch to select. Okay." - Vincent

## UI Complexity and Simplification Needs

● tried resizing the floating nav menu and made it too tiny to use. "whoops, i shrunk it way too much." definitely needs a shrink limit so the UI doesn't disappear. ● hates the hint boxes. says the text in the title and header is super unhelpful, repetitive, and just full of text. "this is just a wall of text, i'm not reading all that". ● wants the calendar plan options to be persistent.

*"i want to see my calendar plan right here all the time." says they should always be on the screen for quick access. - Tamiko*

- *editing the fitness profile/moves is overwhelming. "what the f\*\*\* I just want to work out".*
- *changing a single move is "overkill" and way too complex right now. there are just too many options. - Anny*

*Like, I want to go to "workout," but I might misclick on "calendar." My fingers just follow whatever I click, and it feels confusing. - Nyu*

*could be more clear. Maybe it needs a more obvious camera or button. If not, maybe organize the content better so people can catch it faster. I feel like the screen is kind of crowded, and at first I couldn't see where to start. - Nyu*

- *"make it simpler and more to the point. make the words bigger".*
- *wants recommended workouts right off the bat when she opens the app.*
- *says the most important thing is just getting a curated workout fast, and all the intense customization stuff should just be hidden in the profile section for later. - Anny*

*[Speaker 2] "More workout, like recommended workout at 1st, and then have the user want to go to the profile section to adjust and customize." - Anny*

*[Speaker 2] "Oh, that's just too. That's overkill. Yeah, it has to be easier than that." [Speaker 1] "Okay, Yeah." [Speaker 1] "So it's too complex right now." [Speaker 2] "Yeah, right now there's just too many options." - Anny*

- *went through the onboarding flow, seemed a bit tedious.*
- *suggested adding a drop down plan filter to make searching for routines easier. "would be way faster if this was just a dropdown".*
- *wants to see all the available workout plans directly from the workout mode screen, rather than having to navigate all the way back out. - Tamiko*

## **Gesture and Input Control Problems**

- *she HATES having to switch between pointing and pinching. "I just want one. I don't want to switch back... I just want one thing".*
- *prefers the pinch gesture overall. says it feels faster and more responsive.*
- *the gesture to start/exit (thumbs and index fill bar) takes way too long and is too text-heavy to learn. just wants a simple icon or image to show what to do. - Anny*

**Preference for tapping over hovering in user interface interactions - [Speaker 2]**  
*"there's too much of this stuff. I would just want to tap. I don't want any of this stuff. I just think, like, this is fine. These are cool, but I just want to tap. I do not want to do this hover." - Anny*

*But there are a lot of issues like touching/contact problems and gesture problems—like triggering something incorrectly. The tracking is too sensitive, like if my fingers move, everything starts moving around. I think - Peter*

*[Speaker 2] "It feels faster." [Speaker 1] "More responsive." [Speaker 2] "Yeah. Two. Damn. One. I'm not doing this again. I'm fine." - Anny*

● *using the pinching gesture fine, but she accidentally triggered the end of the workout. "oh no, did i just cancel the whole thing?".* ● *strongly recommends adding a cooldown to the exit gesture so users don't accidentally end the workout if they move their hands wrong.* ● *said there needs to be an "are you sure?" confirmation screen before the workout actually closes out.* - Tamiko

## **Setup and Configuration Burden**

*But if you require me to set all this stuff up, I will not really use it. I need something more convenient, like set up on the phone or something like that, instead of setting it up on a computer.* - Peter

*But it's very hard to set up all the stuff, and also due to technical problems, the feedback of this app is not clear enough.* - Peter

## **Motion Tracking Technical Limitations**

*Um, like, for me, I was using, like, um, the straight 16 cameras, so it can detect whatever you do in these areas. So I do help you to decide whatever motion that you do in during the workout. I think that would be very helpful.* - Vincent

*uh, but I do have like, um, um, some question about it and, um, because I only can detect uh, upper your bodies. And, um, when I do pull-ups, I also uh, other stuff, like for lifting width. But I, I think, and that, that will be a little bit problem, um, to detect it, because your body are basically laid down, you know, one layer, or maybe the camera can be detective.* - Vincent

*It definitely does not work for something like a warm-up section, like just running, for example. It might be good for telling me if I'm lifting or doing something like a strength press.* - Peter

*Even something like my cat running in the background could affect it right now.* - Peter

*A: First, I don't think a single camera capturing the motion is enough. If you see something like those popular VTubers online, they usually use multiple sensors or setups. If you really want to capture the action accurately, you might need some sort of device attached to the person's arm or body to help find the actual location. Also, one camera is not enough—you might need cameras from multiple angles. Because sometimes when exercising, the camera is at a fixed angle and doesn't capture everything properly. Also, since this is kind of a demo -* Peter

*But something about lifting at the gym is we usually have someone else looking at us. So I don't really see the benefit for now. It might work for non-lifting or light exercises.* - Peter

## **App Sensitivity and Response Issues**

*Like, I want to go to “workout,” but I might misclick on “calendar.” My fingers just follow whatever I click, and it feels confusing. - Nyu*

*But the process of opening this app is kind of suffering, I think. Just a lot of the time I can't figure out how, like, I want to go to the next step or I want to take this option. Sometimes the feedback of the app is too sensitive, and sometimes it goes the other way. - Peter*

*But it's very hard to set up all the stuff, and also due to technical problems, the feedback of this app is not clear enough. - Peter*

*But there are a lot of issues like touching/contact problems and gesture problems—like triggering something incorrectly. The tracking is too sensitive, like if my fingers move, everything starts moving around. I think - Peter*

## **Persistent UI Element Accessibility**

- *tried resizing the floating nav menu and made it too tiny to use. "whoops, i shrunk it way too much." definitely needs a shrink limit so the UI doesn't disappear.*
- *hates the hint boxes. says the text in the title and header is super unhelpful, repetitive, and just full of text. "this is just a wall of text, i'm not reading all that".*
- *wants the calendar plan options to be persistent. "i want to see my calendar plan right here all the time." says they should always be on the screen for quick access. - Tamiko*

## **Rest Screen Design Issues**

- *text needs to be way bigger, says "everything's so small" and she can't really read the type unless she gets close.*
- *top bar is totally obstructing the rep bar and the text that says "rest". - Anny*

- *the rest screen needs a total visual overhaul. she didn't realize she was on a break. suggested adding a more clear screen name, making the timer way bigger, and using a different color so it instantly registers as rest time. - Tamiko*

*[Speaker 1] "It is located on top of the rep bar, but that rep bar is..." [Speaker 1] "Pretty high up and it's covered by the top bar. So you see it's right up there. You can see it. Also, if you move back a bit, you can see that bottom text. That says rest as well. But that's covered, right?" [Speaker 2] "It's just two. Yeah, it's covered." - Anny*

## **Real-time Form Feedback and Coaching**

- *wants active feedback on how she's doing. "it's not telling me if my form sucks." suggested the app should offer coaching if it detects your form is not good enough. - Tamiko*

## **Other**

*I mean, I kind of like it. It's quite interesting, but I don't feel very comfortable using it, especially in public. - Nyu*

*So what I'm manipulating this, and I found the workout plan, also the profile, are very convenient to manipulate, and um, like, for example, if I tap here, And I can easily to get my profile on all obviously in a web page and you can actually, there have like a voice coaching on there. You can actually switch on and switch off. - Vincent*

*Oh, like, the 1st impression that I see this software, like, it really impressed me and it do have a new self of working out. Like, I do have, like, um, you do need actual coach to, like, um, with YouTube workout. Actually, the, the motion, motion capture can, like, um, detect your motions. during your work workout. So I think it's a pretty fresh ways to using this software to work out. - Vincent*
